

Tech Brief

Rubber Caps and Plugs Common Practices

The radiator you purchased may not be a 100% identical match versus the Original Equipment radiator you are replacing. Some radiator designs incorporate additional heater lines, outlet connections, and/or sensor ports which are capped or plugged. If your vehicle application requires the use of any of these connections, simply remove the rubber cap or plug and make the necessary connections. If your vehicle *does not* require these connections simply leave the rubber caps and/or plugs as is and install the radiator into your vehicle.
