

Tech Brief

Part Number: 9010079

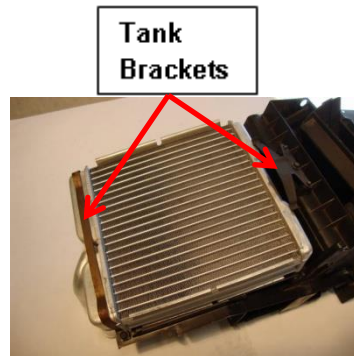

Figure 1

Figure 2

1. Use the original tank brackets to fasten the heater to the plastic heater case (see Figure 1).
2. Longer sheet metal screws may be required to fasten the tank brackets to the heater case.
3. Use the foam strip that was included with your new heater to seal off the sides of the heater. Duct tape and foam are some of the best materials to use to prevent cold air by-pass around a heater.
4. Your new heater is a high efficiency aluminum heater core with a high fin count of 30 fins per inch. The original copper-brass unit only has 13 fins per inch.
